EN - Slow Juicer
READ CAREFULLY AND STORE FOR FUTURE USE.

- This appliance may be used by persons with physical or mental impairments or by inexperienced persons, if they are properly supervised or have been informed about how to use the product in a safe manner and understand the potential dangers.
- Children must not use this appliance or play with it. Keep the appliance and its power cord out of their reach.
- This appliance is intended for home use. It is not intended for use in locations such as:
  - staff kitchens in stores, offices and other workplaces;
  - agricultural farms;
  - hotel or motel rooms and other living areas;
  - bed and breakfast establishments.
- Do not use the appliance in an industrial environment or outdoors.
- Only place the appliance on an even, dry and stable surface.
- Do not place the appliance on or near devices that are a source of heat.
- Never use accessories, which have not been supplied with this appliance or which have not been explicitly recommended by the manufacturer for this appliance.
- Before connecting the appliance to a power socket, make sure the voltage stated on its rating label corresponds to the voltage in your power socket.
- Make sure that the appliance is correctly assembled before putting it into operation.
- Prior to juicing, remove hard stones that are contained in, for example, apricots, peaches, mangoes, etc. and inedible peels, e.g. from oranges, pineapples, melons, mandarins, etc.
- Do not use the juicer for processing frozen or excessively hard ingredients, e.g. sugar cane.

⚠️ **Warning:**
Incorrect use may result in injury.

- Always use the supplied pusher to push the fruit and vegetables through the feed tube. Never use your hands or other items.
- Always turn off the appliance and disconnect it from the power socket if you will not be using it and if you are leaving it without supervision, before assembly, disassembly or cleaning.
- Prior to removing parts that move during use, check that the appliance is turned off and disconnected from the power socket and wait until the moving parts come to a stop.
- Do not wash the base of the appliance under running water or submerge it in water or another liquid.
- Ensure that the power plug contacts do not come into contact with water or moisture.
- Do not place heavy items on the power cord. Make sure the power cord does not hang over the edge of a table or that it does not touch a hot surface.
- Do not disconnect the appliance from the power socket by pulling on the power cord. This could damage the power cord or the power socket. Disconnect the cord from the power socket by gently pulling the plug of the power cord.
- It is forbidden to use the appliance if it has a damaged power cord or plug. If the power cord is damaged, have it replaced at a professional service centre.
- Do not use the appliance if its strainer or any other part of the appliance is damaged. To prevent causing a dangerous situation, do not repair the appliance yourself. Have all repairs or adjustments performed at an authorised service centre. By tampering with the appliance you risk voiding your legal rights arising from unsatisfactory performance or quality warranty.
### Slow Juicer
#### User’s manual

- Prior to using this appliance, please read the user’s manual thoroughly, even in cases when one has already familiarised themselves with previous use of similar types of appliances. Only use the appliance in the manner described in this user’s manual. Keep this user’s manual in a safe place where it can be easily retrieved for future reference.
- We recommend saving the original cardboard box, packaging material, purchase receipt and responsibility statement of the vendor or warranty card for at least the duration of the legal liability for unsatisfactory performance or quality. In the event of transportation, we recommend that you pack the appliance in the original box from the manufacturer.

### DESCRIPTION OF THE JUICER
- A1 Pusher
- A2 Large feed tube with lid
  - Feed tube is divided into two chambers. The pusher is inserted through the smaller hole into the rear chamber and ingredients are inserted through the larger hole into the front chamber.
- A3 Pressing screw
- A4 Stainless steel filtration microstrainer
- A5 Microstrainer holder
- A6 Juice collector from Tritan
- A7 Closable juice spout
- A8 Juice jug with capacity of 0.8 l
- A9 Pulp ejection chute
- A10 Pulp container with capacity of 0.8 l
- A11 Control knob for turning the juice collector on and off with the option of setting reverse motor rotation:
  - R-0-1 (reverse motor rotation: off-on)
- A12 Base with motor unit
- A13 Anti-slip feet
- A14 Cleaning brush

### THE PRINCIPLE AND ADVANTAGES OF A SLOW JUICER
- The operating principle of this juicer is based on a system where ingredients are juiced slowly. The pressing screw A3 first coarsely masticates the inserted ingredients and in the subsequent phase juice is separated from the pulp. Juice pressed out in this way contains minimal fibre content and so is characterised by a high purity, it is slower to oxidise and retains valuable vitamins and enzymes. The strainer holder A5 is fitted with a spatulas that automatically clean the microstrainer A4 during operation. This prevents its excessive clogging and makes it easier to clean after use.
- This juicer is suitable for juicing both soft and hard fruits and vegetables such as citrus fruits, currants, gooseberries and other berries, apples, pears, carrots, beetroot, cucumbers, pineapple, melon, etc. It can even handle leafy vegetables, however we recommend to process them together with other fruits and vegetables.
- It is not particularly suitable for juicing overripe fruits or floury apples.

### BEFORE FIRST USE
1. Remove all packaging materials from the appliance and its accessories.
2. Thoroughly wash all removable parts (pusher A1, feed tube with lid A2, pressing screw A3, strainer A4, strainer holder A5, juice collector A6 and the juice jug A8 and pulp container A10) that come into contact with food in warm water using kitchen detergent. Then rinse all these parts under clean running water and thoroughly wipe dry with a fine wiping cloth.

**Note:**
All removable parts are suitable for washing in a dishwasher.

### ASSEMBLING THE JUICER
1. Place the base motor unit A12 on an even, dry and stable surface. During assembly, the appliance must be turned off and disconnected from the el. power socket.
2. Pick up the juice collector A6 and turn it upside down. There is a black silicone plug on the bottom of the collector at the pulp ejection chute A9. To prevent pulp from escaping out off the pulp ejection chute A9, it is necessary to properly seal the hole at the pulp ejection chute A9 with the silicone plug.

**Note:**
To enable easier cleaning, the pulp ejection chute A9 has a hole with a silicone plug.

3. Turn the juice collector A6 back over. Place it on the base A12 so that the projections on the top side of the base A12 slide into the holes on the bottom of the juice collector A6. Turn the juice collector A6 clockwise to firmly connect it to the base A12. When the juice collector A6 is correctly attached to the base A12, it cannot be lifted up separately.
4. Insert the strainer A4 into the holder A5.

5. Into the juice collector A6, place the holder A5 with the inserted strainer A4 so that the symbol “!” on the strainer A4 is in alignment with the same symbol marked on the juice collector A6. Firmly push down the holder A5 with the strainer A4 making sure that the gear at the bottom of the holder A5 fits into the gear wheel on the bottom of the juice collector A6.
6. Insert the pressing screw A3 into the strainer A4 and push it down and turn it so that it is properly seated on it the drive shaft of the motor unit.
7. Place the feed tube with the lid A2 on to the juice collector A6. Make sure that the open lock symbol on both the lid A2 is aligned with the symbol on the juice collector A6. Then turn the feed tube A2 clockwise all the way. This will secure the lid A2 on the juice collector A6. The “!” symbol marked on the juice collector A6 will now be aligned with the closed lock symbol on the lid A2.
8. Insert the pusher A1 into the feed tube A2.

### USING THE JUICER
1. Make sure that the juicer is correctly assembled and then connect it to the el. power socket. The juicer is equipped with a safety mechanism that prevents it from being started unless the lid is correctly secured in the correct position.
2. Place the juice jug A8, a glass or another suitable container below the juice spout A7. Open the lock of the juice spout A7 so that the juiced juice can flow freely out of the juice collector A6. Place the pulp container A10 below the pulp ejection chute A9.
3. Prepare the fruit or vegetables. Thoroughly wash the ingredients. Cut up any larger pieces that do not pass through the feed tube A2. Remove hard stones that are contained in, for example, apricots, peaches, mangoes, etc. and inedible peels, e.g. from oranges, pineapples, melons, mandarins, etc.
4. Prior to starting the juicer, make sure that the lid is properly secured in the correct position. Turn on the juicer by turning the control knob A11 to position 1 (On). Take the pusher A1 out of the feed tube A2. Gradually add the prepared ingredients into the feed tube A2 and push them down using the pusher A1. You will achieve optimal results if you fill the feed tube A2 gradually pushing the ingredients down gently.

**Attention:**
Do not use fingers or other utensils to push ingredients through the feed tube A2. Always use the pusher A1 designed for this purpose. Only insert the pusher A1 into the rear chamber of the feed tube A2. The maximum time of non-stop operation of this appliance is 15 minutes. Then allow it to cool down for 10 minutes.

5. If the juice jug A8 or pulp container A10 fill up during the juicing process, turn the juicer off by turning the control knob A11 to position 0 (Off), empty out the respective container and then put it back in its place. Then you can put the juicer back into operation and continue juicing.
6. When you have finished juicing, we recommend that you remove pulp remains from the juice collector A6. Hold the control knob A11 in the “R” position (reverse motor rotation) for 3–5 seconds, and then release it so that it returns to the 0 position (Off). Repeat the entire process two to three times. You can do the same in the event that you clog up the appliance with an excessive amount of ingredients.
7. Turn the juicer off by setting the control knob A11 to position 0 (Off) and disconnect it from the power socket. Prior to removing the juice jug A8, we recommended closing the spout A7 so that juice does not drip out of it.
8. Disassemble the juicer, see chapter Disassembling the juicer and clean it out according to the instructions contained in chapter Cleaning and maintenance.

### DISASSEMBLING THE JUICER
1. Before disassembling the juicer, make sure that it is turned off and disconnected from the power socket. Make sure that all parts that move during operation have stopped moving.
2. Close the juice spout A7 and remove the juice jug A8 and the pulp container A10. Remove the pusher A1 from the feed tube A2.
3. Turn the feed tube A2 anticlockwise until the open lock symbol shown on the lid A2 is aligned with the “!” symbol on the juice collector A6 and then take it off the juice collector A6.
4. Remove the juice collector A6 with the holder A5, the strainer A4 and the pressing screw A3 inside from the base A12 by turning it anticlockwise and lifting it up.

**Note:**
It will be easier to take the juice collector A6 off the base A12 when you clean out the pulp remains after juicing, as described in point 6 in chapter Using the juicer.

5. Remove the pressing screw A3, the strainer A4 and the holder A5 from the juice collector A6.
USEFUL ADVICE AND TIPS
- Thoroughly wash all the ingredients before you start juicing. Cut up any larger pieces that do not pass through the feed tube A2. Remove hard stones that are contained in, for example, apricots, peaches, mangoes, etc. and inedible peels, e.g. from oranges, pineapples, melons, mandarins, etc.
- To achieve optimal results, always process only fresh ripened fruits and vegetables. Overripe or unripe fruits and vegetables will negatively affect the resulting taste of the juice.
- If you juice fruits and vegetables of varying consistency, we recommend that you start with the softer fruits and vegetables, e.g. citrus, berries, etc. and then proceed on with harder fruits and vegetables, e.g. apples, carrot.
- Juice leafy vegetables together with other fruits and vegetables, e.g. apples, carrot, beetroot, citrus, etc. Pushing them into the feed tube A2 at the same time.
- Do not use the juicer for processing frozen or excessively hard ingredients, e.g. sugar cane.
- Place the ingredients into the feed tube A2 gradually and push through gently with mild pressure. Do not overfill the feed tube A2 and do not push the ingredients in too quickly and with excessive pressure. The process separating the juice from the pulp occurs gradually and will not be sped up by pushing ingredients in quickly.
- To prevent freshly pressed apple juice from turning brown, you can add a little lemon juice.
- To prevent losing valuable minerals, we recommend consuming the juice immediately after it is pressed.

CLEANING AND MAINTENANCE
- Clean out the juicer after every use. Before cleaning it, make sure that the juicer is turned off, disconnected from the power socket and properly disassembled.
- Remove juice and pulp residues from the juice jug A8 and the pulp container A10. Thoroughly wash both the juice jug A8 and the pulp container A10, the pusher A1, the feed tube with hopper and lid A2, strainer holder A5 and the pressing screw A3 in warm water with kitchen detergent. Then rinse them under clean running water and thoroughly wipe dry with a fine wiping cloth.
- Thoroughly wash the strainer A4 and the juice collector A6 under warm running water using kitchen detergent and the included brush A14. If you are unsuccessful in cleaning out the small holes in the strainer A4, soak it first in warm water containing lemon juice. The pulp ejection chute A9 at the juice collector A6 has a hole with a silicone plug. To make cleaning easier: open the plug and clean the hole thoroughly. Do not forget to properly seal the plug after cleaning it. Then to finish off, rinse the strainer A4 and the juice collector A6 under clean running water and thoroughly wipe dry with a fine wiping cloth.

Note:
We recommend that all accessories are washed immediately after use. Dried on juice and pulp residues are far more difficult to remove and may clog the holes in the strainer A4 and reduce subsequent juicing efficiency.

Note:
All removable parts are suitable for washing in a dishwasher.

- For cleaning the base unit A12 use a cloth lightly dipped in a weak solution of water and neutral kitchen detergent. Then wipe the surface of the base unit A12 with a clean dampened cloth and dry thoroughly. Never submerge the base unit A12 in water.
- Do not use abrasive cleaning products, solvents, thinners, etc. Otherwise the surface of the appliance may be damaged.

STORAGE
- When not using the appliance, store it in a dry place out of children's reach. You can store the appliance assembled.

TECHNICAL SPECIFICATIONS
Rated voltage range ................................................................. 220–240 V
Rated frequency ........................................................................ 50/60 Hz
Rated power input .................................................................... 400 W
Noise level .................................................................................. 70 dB(A)

The declared noise emission level of the appliance is 70 dB(A), which represents a level A of acoustic power with respect to a reference acoustic power of 1 PW.

Changes to text and technical parameters are reserved.
